

INVITATION TO

City Water Circles project mid-term event

Urban Cooperation Models for enhancing water efficiency and reuse in Central European functional urban areas with an integrated circular economy approach

23 March 2021 9:30-12:30

The CWC project aims to support municipalities in reforming the urban water infrastructure systems via applying a circular economy approach.

This will be achieved by promoting a water saving culture, including the use of non-conventional water resources and by taking the lead in adopting urban rainwater harvesting and utilisation as well as greywater recovery measures on city level.

The conference gives a deeper insight to the project outcomes:

- how can a group of local stakeholders give effective contribution to local strategies
- tools and learning resources on circular urban water management for municipalities
- innovative circular water technologies in pilot projects

Due to the limited number of participants, registration is needed.

Link for registration: http://bit.ly/CWC_midterm_registration

Deadline of registration: 19 March 2021
